**EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Replace the Abstract with: -- Apparatus and method offloads processing from a networking processor operating in a storage environment. Three main functions are offloaded: semaphore processing, frame order processing, and timer processing. Offloading of semaphore processing enables ordered access to semaphores. Offloading of frame order processing enables the network processor to quickly transmit an incoming frame if the incoming frame is the next one in the frame order. Offloading of timer processing enables background checking of the timer list.--

The following is an examiner's statement of reasons for allowance: The prior art teaches related linking list and semaphore systems but fails to teach the combination including the limitations:

(Claim 1): "...a hash bucket memory having an array of bit-bucket pointers that each operate as a head pointer to a linked list of active semaphore structures, the hash bucket memory addressable by a hash address derived through application of a hash

function to a semaphore value and wherein each semaphore structure accommodates a current thread that owns a semaphore and potentially one or more waiting threads in a queue waiting for release of the semaphore; semaphore circuitry, coupled to said ZBT interface, that receives a signal from said network processor, and that controls said semaphore associated with the corresponding predetermined linked list of active semaphore structures in the hash bucket memory wherein the received signal and said semaphore are related to locking and unlocking access to data in the storage environment";

(Claim 11): "...assigning a current thread as owner of a semaphore and potentially one or more waiting threads in a queue waiting for release of the semaphore to a semaphore structure in a linked list of active semaphore structures stored in a hash bucket memory addressable through application of a hash function to a semaphore value associated with the semaphore; controlling said semaphore associated with the linked list of active semaphore structures in the hash bucket memory wherein the received signal and the semaphore are related to locking and unlocking access to data in the storage environment".

Claims 2-10 and 12-17 are allowed as being dependent upon, and thus incorporating therein, the allowable subject matter of the respective parent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
